**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1, 12-18** are rejected under 35 U.S.C. 102(b) as being anticipated by Wroblewski (U.S. 4,908,822).

**As per claims 1, 12-15 and 18**, Wroblewski teaches a plurality of dedicated monitoring devices each assigned to a respective one of the system components to be monitored (see Fig. 1 and col. 2, lines 1-19), each of the dedicated monitoring devices being operable independently of the respective system component to be monitored (see col. 4, lines 4-29 and col. 10, lines 31-40).

***Allowable Subject Matter***

2. **Claims 2-11** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of record teaches or suggests that the monitoring devices are configured to compare monitoring data received from the respectively associated system component and from other system components or from other monitoring

Art Unit: 2857

devices, for determining whether or not the respectively associated system component is operating properly in combination with the rest of the claim limitations.

3. **Claims 16 and 17** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of record teaches or suggests that the bus units contain a number of communications controllers corresponding to a number of buses connecting the communications controllers to one another, wherein each communications controller is connected to a different bus in combination with the rest of the claim limitations.

#### ***Response to Arguments***

4. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.

#### **Prior art**

5. The prior art made record and not relied upon is considered pertinent to applicant's disclosure:

**Engel et al. ['329]** disclose dual microprocessor electronic trip unit for a circuit interrupter.

**Dittmar et al. ['547]** disclose method fault-tolerant communication under strictly real-time conditions.

**Morton ['303]** discloses test method and apparatus for cellular array processor chip.
